

Our Process

Step 1. We provide a free video/visual inspection of your HVAC system.

Step 2. We develop a scope-of-work document for work to be performed and a timeline for completion.

Step 3. Trained technicians systematically clean every component of your home or building ventilation system including:

- Air handling unit blower and coil
- Outdoor air intakes
- VAV boxes
- Reheat coils
- Supply, return and exhaust ductwork

Step 4. When cleaning is complete, we conduct a final inspection and provide a before-and-after inspection.

Step 5. We leave your home or building as we found it. There's no mess left for you to clean so you can continue with your busy life.

Electrostatically, The Ultimate Way To Disinfect.

The decontamination process is a sanitizing, disinfecting, odor eliminating and allergen reducing cleaning process that reduces the spread of health-threatening pathogens such as mold & mildew, indoor air pollution, bacteria & viruses- E.Coli, MRSA, H1N1 (Swine Flu), Legionella, Norovirus and HIV.

Through the electrostatic application, the particles are bonded to the surfaces for "long-lasting" cleaning and protection.

- 1) Environmentally conscious
- 2) Gives you complete surface coverage.
- 3) Improves air quality

Electrostatically charged droplets are attracted to the target surfaces. These electrical forces are 75 times stronger than gravity. The spray wraps around to cover all parts of the target, including the underside, back side, and crevasses. No other spraying system has this patented air-assisted electrostatic technology.

BEYOND CARPET CLEANING

CARPET | TILE & GROUT | HARDWOOD | UPHOLSTERY | AIR DUCT

What's In The Air Circulating Through Your Home or Business?

Dust, debris, and other contaminants.

Without proper cleaning these fragments accumulate in your heating, ventilation and air conditioning (HVAC) system. Eventually, this build up can trigger allergies and reduce energy efficiency, causing employee downtime and increasing operating costs.

Our air duct cleaning is certified by NADCA, The National Air Duct Cleaners Association. We offer a complete cleaning of your ventilation system by a certified professional with up-front pricing and no hidden costs.

Commercial Services Include:

- Complete HVAC & Duct Cleaning
- Trash Chute Cleaning & Sanitizing
- Dryer Vent Cleaning (Including Stacks)
- Grease Hood/Exhaust Cleaning

The HVAC Inspection, Maintenance and Restoration Association

We're proud to be certified by NADCA. Only highly trained Stanley Steemer® employees perform the work. It's an approach that differentiates us from the competition.

Beyond Clean: Improved Energy Efficiency & Indoor Air Quality

Energy Savings:

When dust, debris and other contaminants build up in your HVAC system, they can reduce

energy efficiency and increase your energy costs. The contaminants force your HVAC system to work harder to heat or cool. Over time, this can shorten the life of your system. By cleaning your HVAC system properly, you can not only reduce your energy costs, you can extend the life of your system.

Indoor Air Quality:

If you think the air you breathe indoors is cleaner than what's outside, think again. According

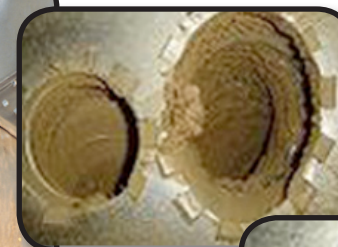

to the EPA, indoor air can be two to five times more polluted than outdoor air.

All that circulating bad air can potentially lead to colds and sore throats, headaches, asthma, allergies and chronic fatigue. You can reduce the contaminants circulating in your home by cleaning your HVAC system.
